Date Issued November 1969

Bureau of Land Management U.S. DEPARTMENT OF THE INTERIOR

MOBILE SCALING PLATFORM

An employee suggestion from Mr. Raymond E. Bagwell of the Roseburg, Oregon District Office has been adopted for optional use by districts having a need for log scaling platforms. The suggestion involves the construction and use of a portable platform that can be transported as a trailer unit and can be assembled and dis-assembled by one man in approximately 30 minutes.

Technical staff personnel evaluating the suggestion and those who have seen and used the prototype platform estimate the savings in one years time to exceed the difference in cost between the portable model and conventional types now in use.

Detailed drawings and specifications of the unit pictured below are available upon request from the Roseburg, Oregon District Office.
